Solid water in oil emulsion for make-up and skin and body treatments,  
comprises an oily phase stabilized by a polyamide with pendant and  
terminal fatty acid chains

Abstract (Basic): \*WO 200197773\* A1

NOVELTY - A solid water in oil emulsion for make-up and skin and  
body treatments, comprises an oily phase stabilized by a polyamide with  
pendant and terminal fatty acid chains.

Best Available Copy

**DETAILED DESCRIPTION** - A solid emulsion containing dispersed one within the other an aqueous phase and a liquid fatty phase structured by one or more polymers of average mol.wt. 1000- 30000 comprising a polymeric backbone with repeated units with at least one heteroatom and pendant and terminal optionally functionalized 12-120C fatty chains bonded to them. The liquid fatty phase and polymer form a physiologically acceptable medium.

**USE** - The solid emulsion composition is used for application to the skin in care, makeup or treatment procedures (claimed).

**ADVANTAGE** - The product has a better feel and is less greasy than wax stabilized compositions. It applies more evenly and has less tendency to sink into creases or wrinkles giving an uneven effect.
